

TalkType

Hear about TalkType directly from those who use it.

David Edwards

Assistive Technology Trainer

“
It’s literally
as simple
as that

David's TalkType experience

David Edwards is a freelance assistive technology trainer who also has dyslexia and dyspraxia. Being neurodivergent allows David to understand, empathise, and relate to the vast majority of his users. And he finds TalkType to be an empowering and easy-to-use tool that can improve productivity levels.

David sees one of the main challenges for people with dyslexia or dyspraxia is overcoming their short-term memory problems. This concern can lead to higher stress levels, particularly when users need to type out study assignments or work reports. People with dyslexia can find it harder to write in a structured way and engage with the various stages of typing out text. And this can lead them into time-consuming and stressful mindsets without the right support.

“
Just literally, you talk and everything appears on the screen. It's literally as simple as that

TalkType makes the best use of neurodivergent skill sets

A key strength of people with neurodivergence is their verbal articulation and communication skills. Many neurodivergent people are strong orators and speakers. And despite the obstacles they face with writing words, people with dyslexia and dyspraxia can usually express themselves very well when speaking. This is a huge benefit when using TalkType's software which can easily pick up clear and articulate words and dictate them on the screen.

The key advantage of TalkType's dictation software is its ease of use. Many of David's clients have remarked about how simple and easy TalkType to use it is. And it's this aspect of the software that helps neurodivergent users reduce their stress and overwhelm levels and allow TalkType to do the work for them.

Users can look forward to fast results

David finds TalkType is so simple and easy to use. Anyone can speak into the software which picks up their words straight away and puts them on the screen. David enjoys this simplicity but also highlights the speed of the dictation and transcription on the page.

“

It's a bit like a mobile phone of today where we say 'How did we ever manage without mobile phones', I think we can say the same about TalkType.

TalkType is very straightforward and easy-to-use. David remarks that he finds TalkType has a low learning curve compared to other forms of dictation software that he trains users on. Users should find it easy to load the software and talk into it to get immediate results. Other harder-to-use software can have a higher learning curve that can put people off from actually using it when they need to.

TalkType is intuitive, easy-to-use, and has a low learning curve. But it is also very fast and very accurate.

David recognises the very high degree of speed and accuracy that TalkType offers its users and knows this is the software's key edge. David says users will be blown away by how easy it is to use and be delighted with its fast and accurate form of dictation.
